

ADVANCED G3 LIQUID FOR GENERAL USE

Advanced G3 Liquid Compound combines all the reliability and other advantages of G3 Paste with reduced clean up time when compounding by machine.

For sheer all-round performance on paintwork defects

- Removes P1500 and finer abrasive marks quickly and easily
- One-step system provides a fast cutting action and a high gloss finish
- Use with water for optimal performance
- Reduced clean up time due to minimal splatter
- Silicone free
- For hand or machine application

ADVANCED G3 LIQUID FOR GENERAL USE

For best results follow these recommended steps:

Step 1

- Soak Advanced G MOP Compounding Foam in clean water.
- Squeeze excess water from foam and fit to a polishing machine.
- Spin off excess water until there is no over-spray from the foam.
- Apply a small amount of Advanced G3 Liquid to the paint surface (about the same size as the flip top on the bottle).
- Spread compound onto panel with the foam before starting the machine (reduces splatter).
- Begin compounding with a running speed of 1500 – 1800 rpm. Buff until marks have been removed.
- Keep the G MOP damp by spraying minimal amounts of clean water from a water spray bottle. Add more Advanced G3 Liquid if necessary to completely remove the marks.

Step 2 (optional)

- For a heightened gloss finish, leave the compounding residue on the paint surface. Change from the Compounding Foam to the Advanced G MOP Polishing Foam.
- Spray a light mist of water onto the paint surface and run lightly over the polishing area with the Polishing Foam kept flat until the residue has been removed and a satisfactory gloss has been achieved.
- Finally, wipe carefully with a Farécla Finishing Cloth.
